

# **Portfolio Tool for Assessing Trade-offs in Water Supply Strategies**

Jim Pokrandt, Colorado River District  
and Chair, Colorado Basin Roundtable

# Mid Demand-High Supply

## Key Findings

Statewide demand is 790,000 acre feet

Includes 60,000 acre feet for oil shale

Colorado River Development

150,000 acre feet to West Slope

168,000 acre feet to the East Slope

High Conservation: 460,000 acre feet

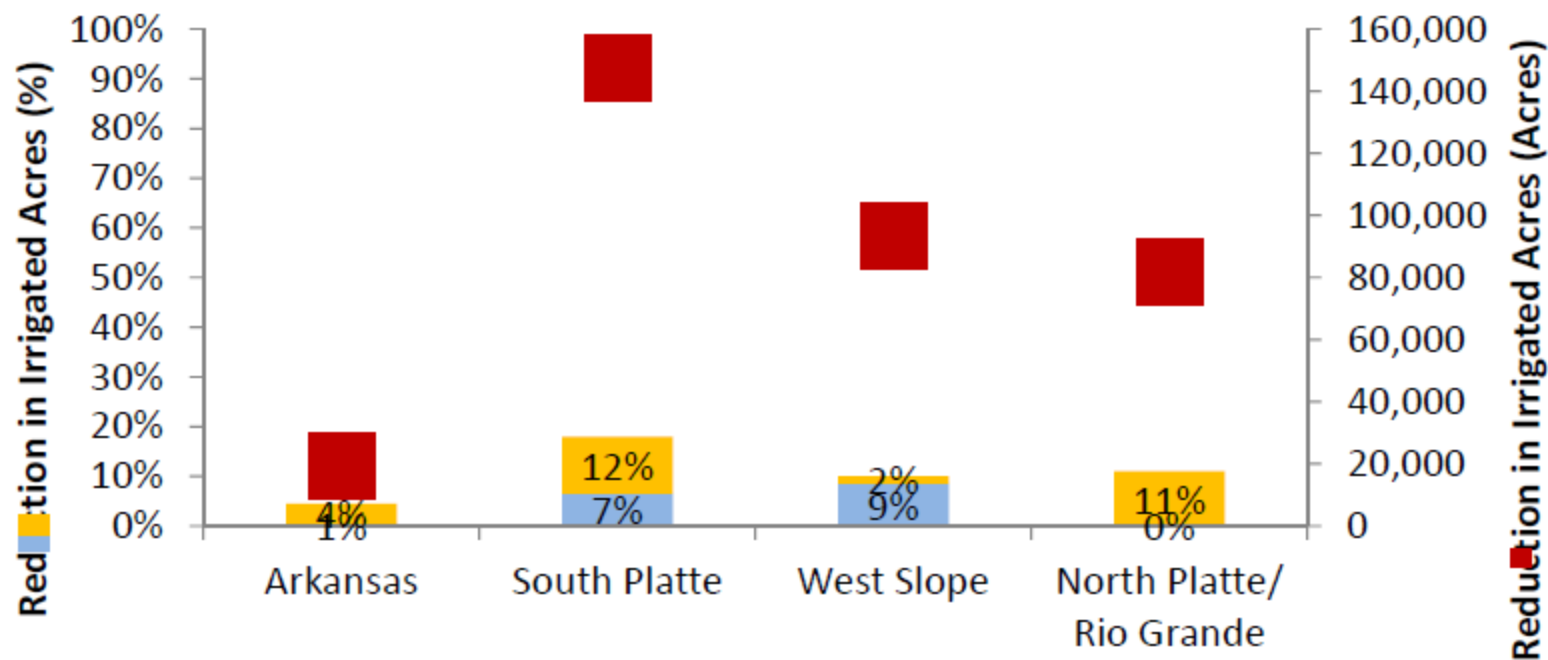

60% goes to gap

**Table 1: Comparison of 2050 implementation and penetration level for three conservation strategies, and demand reductions used in forecasts**

Measure	Implementation or Penetration Level by 2050		
	Low Strategy	Medium Strategy	High Strategy
<b>System-wide conservation measures with potential to impact all customers</b>			
Public information and education	~100%	~100%	~100%
Integrated resources planning	~100%	~100%	~100%
Conservation-oriented water rates	~100%	~100%	~100%
Water budget-based water rates	<=10% of utilities implement	<=30% of utilities implement	<=50% of utilities implement
Conservation-oriented tap fees	0 - 5% of utilities implement	5 - 10% of utilities implement	<= 50% of utilities implement
Smart metering with leak detection	<=10% of pop.	<=50% of pop.	50 - 100% of pop.
<b>Residential indoor savings and measures</b>			
<b>Reduction in Residential Per Capita Indoor Use</b>	<b>Res. Indoor gpcd = 40</b>	<b>Res. Indoor gpcd = 35</b>	<b>Res. Indoor gpcd = 30</b>
<ul style="list-style-type: none"> <li>Conservation-oriented plumbing and building codes, green building, rules for new residential construction</li> </ul>	30-50% of state impacted	50-70% of state impacted	70-100% of state impacted
<ul style="list-style-type: none"> <li>High efficiency toilets, clothes washers, faucets, and CFI equipment</li> </ul>	Passive ~100%	Passive ~100%	Passive ~100%
<ul style="list-style-type: none"> <li>Submetering of new multi-family housing</li> </ul>	0%	~50%	~100%
<ul style="list-style-type: none"> <li>Reduction in customer side leakage</li> </ul>	33% savings - passive from toilet replacement	37% savings - passive from toilet replacement and active repairs	43% savings - passive from toilet replacement and active repairs
<b>Non-Residential indoor savings and measures</b>			
<b>Reduction in Non-Residential Per Capita Indoor Use</b>	<b>15% reduction</b>	<b>25% reduction</b>	<b>30% reduction</b>
<ul style="list-style-type: none"> <li>High efficiency toilets, urinals, clothes washers, faucets, and showers</li> </ul>	Passive ~100%	Passive ~100%	Passive ~100%
<ul style="list-style-type: none"> <li>Conservation-oriented plumbing and building codes, green building, rules for new non-residential construction</li> </ul>	30-50% of state impacted	50-70% of state impacted	70-100% of state impacted
<ul style="list-style-type: none"> <li>Specialized non-residential surveys, audits, and equipment efficiency improvements</li> </ul>	0-10% of utilities implement	10-50% of utilities implement	50-80% of utilities implement
<b>Landscape conservation savings and measures*</b>			
<b>Landscape water use reductions (residential and non-residential)</b>	<b>15% reduction</b>	<b>22-25% reduction</b>	<b>27-35% reduction</b>
<ul style="list-style-type: none"> <li>Targeted audits for high demand landscape customers</li> </ul>	0-30% of utilities implement	30-50% of utilities implement	50-80% of utilities implement
<ul style="list-style-type: none"> <li>Landscape transformation of some high water requirement turf to low water requirement plantings</li> </ul>	<=20% of landscapes	20-40% of landscapes	>50% of landscapes
<ul style="list-style-type: none"> <li>Irrigation efficiency improvements</li> </ul>	<=10% of landscapes	<=50% of landscapes	50 - 100% of landscapes
<b>Utility Water Loss Control</b>			
<b>Improved utility water loss control measures</b>	<b>&lt;=7% real losses</b>	<b>&lt;=6% real losses</b>	<b>&lt;=6% real losses</b>

\*Landscape water demand reductions include the anticipated impact of urban densification.

## Reduction in Irrigated Acres in 2050 Based on Scenarios

- % Ag Lost due to Urbanization
- % Ag Transfers & Other Factors
- Reduction in Irrigated Acres from Agricultural Transfers (Acres)

Region	Ag Lost due to Urbanization	% Ag Lost due to Urbanization	Ag Transfers & Other Factors	% Ag Transfers & Other Factors	Total Reduction in Irrigated Acres	Total % Ag Loss
Arkansas	2,500	1%	17,000	4%	19,500	5%
South Platte	52,500	7%	95,000	12%	147,500	18%
West Slope	78,500	9%	15,000	2%	93,500	10%
NP / RG	1,000	0%	81,000	11%	82,000	11%

# High Demand-Low Supply

Statewide demand is 1,060,000 acre feet

Includes 60,000 acre feet for oil shale

Colorado River Development

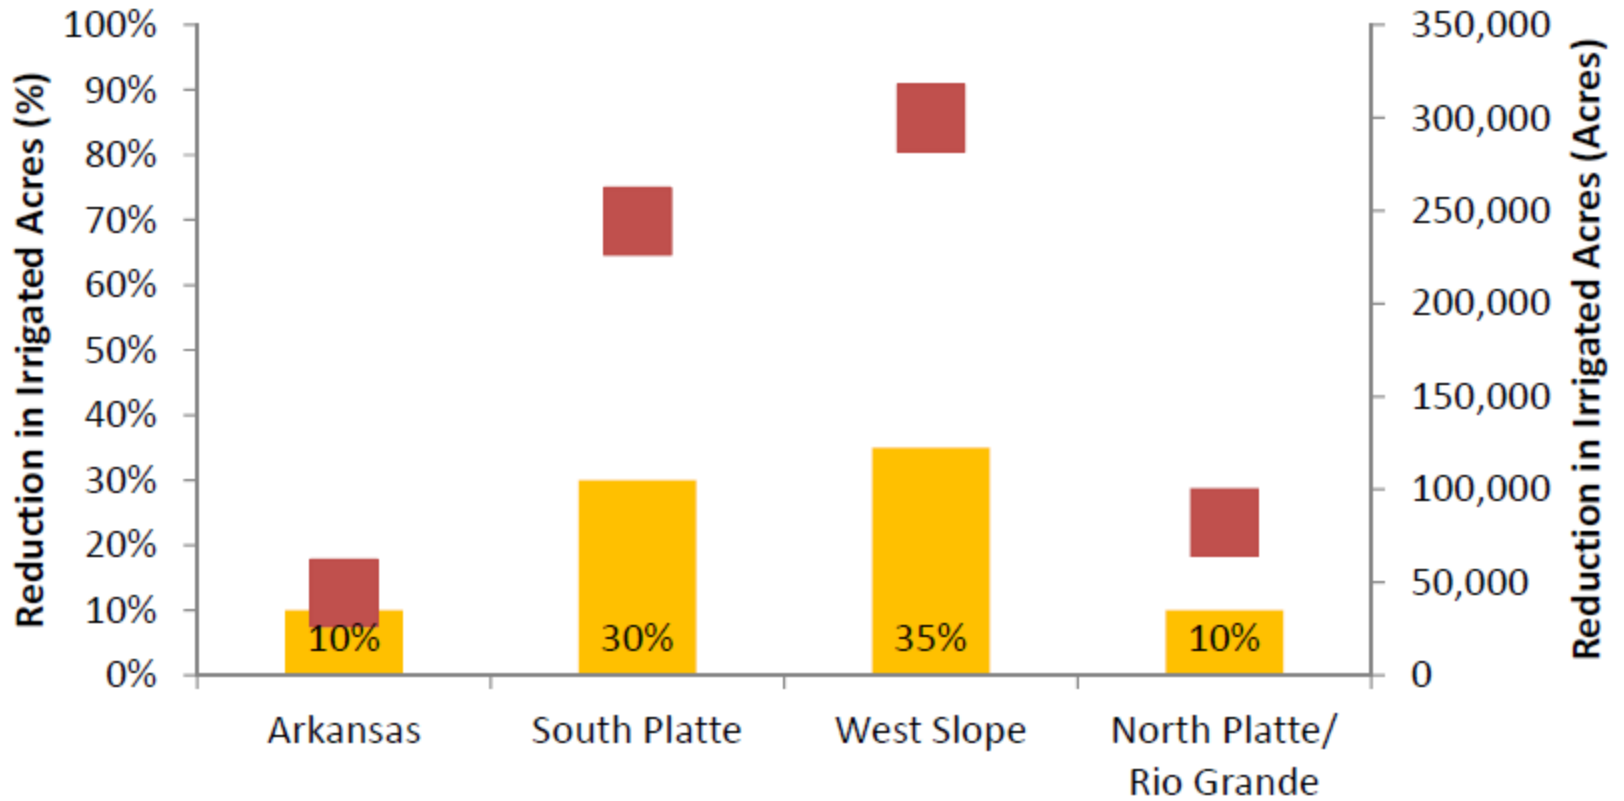

0 acre feet to West Slope

0 acre feet to the East Slope

High Conservation: 460,000 acre feet

60% goes to gap

## Reduction in Irrigated Acres in 2050 Based on Scenarios

■ Percent Reduction in Irrigated Acres from Agricultural Transfers (%)

■ Reduction in Irrigated Acres from Agricultural Transfers (Acres)

Region	Ag Lost due to Urbanization	% Ag Lost due to Urbanization	Ag Transfers & Other Factors	% Ag Transfers & Other Factors	Total Reduction in Irrigated Acres	Total % Ag Loss
Arkansas	3,000	1%	41,000	10%	44,000	10%
South Platte	58,000	7%	186,500	23%	244,500	29%
West Slope						
North Platte/Rio Grande						

# High Demand-Mid Supply

Statewide demand is 1,060,000 acre feet

Includes 60,000 acre feet for oil shale

Colorado River Development

150,000 acre feet to West Slope

0 acre feet to the East Slope

High Conservation: 460,000 acre feet

100% goes to gap

## Reduction in Irrigated Acres in 2050 Based on Scenarios

- % Ag Lost due to Urbanization
- % Ag Transfers & Other Factors
- Reduction in Irrigated Acres from Agricultural Transfers (Acres)

Region	Ag Lost due to Urbanization	% Ag Lost due to Urbanization	Ag Transfers & Other Factors	% Ag Transfers & Other Factors	Total Reduction in Irrigated Acres	Total % Ag Loss
Arkansas	3,000	1%	19,000	5%	22,000	5%
South Platte	58,000	7%	120,500	15%	178,500	21%
West Slope	92,000	10%	30,000	4%	122,000	13%
NP / RG	1,000	0%	81,000	11%	82,000	11%
