**What I did for my  
summer 2013 Faculty  
Fellowship with the US  
Fish and Wildlife  
Service in Region 5  
or.....  
What I did at summer  
camp in Alaska!**

**By Stephanie Matlock,  
Instructor, Biological Sciences**

The US Fish and Wildlife Service Summer Faculty Fellowship program offers opportunities for faculty to participate in a four week fellowship where they are assigned to a USFWS field station to engage in management effort and scientific projects ongoing with the agency. Fellows work with local staff and scientists collecting and analyzing data to develop recommendations regarding USFWS effort. Their followup duties include communication, promotion and improvement of on-campus (CMU) conservation career awareness and career opportunities with the USFWS. Stephanie was one of only five faculty members competitively selected from throughout the

United States to participate in the fellowship program. She also presented a short lecture on the results of her fellowship experience to Daniel Ashe, the Director of the USFWS and other senior agency officials at the Closing Fellowship Ceremony in Washington D.C.

Please come join Stephanie as she tells about her Faculty Fellowship in southeast Alaska for the month of July. A month filled with fieldwork, flying and fun. Her mission was to learn about the US Fish and Wildlife Service and help students become employed by this federal agency.

**Please come with your lunch and  
bring your colleagues.**
