

Brenna Mefford, P.E.

Project Engineer, Wilson Water Group

Brenna joined Wilson Water Group in 2017 with three years of experience, working in water resources in both Colorado and Wyoming. She earned her M.S. degree in Civil Engineering with a focus in Water Resources from Colorado State University. Her research focused on timing of irrigation events based on remote sensing of crop stress and calibrating surface energy balance equations for accurate calculation of crop consumptive use. After graduation she worked on interstate water resources issues using hydrologic and water accounting models and remote sensing. She has worked in basins ranging from the Powder River Basin in Wyoming to the Arkansas River Basin in Colorado. In her free time she loves hiking with her two dogs, fly fishing, running and traveling.
