

Scott McGettigan

Utah Division of Water Resources

Scott McGettigan has spent the entire, nearly 10 years, of his professional career working for the State of Utah at the Division of Water Resources. He is relatively new to the world interstate-streams and Colorado River issues, having only two years in the section, and is still learning a great deal. But he finds history of the River, and complex challenges facing everyone involved to be fascinating. During this brief time he has worked on, among other things, the Colorado River Salinity Control Program, the System Conservation Pilot Program, and UCRC Technical advisory committee. Previous to his new assignments Scott worked in hydrology and modeling. Scott is a graduate of the University of Utah with a BS in civil and environmental engineering, and is a licensed engineer. He also enjoys playing the guitar, watching sports, and wrestling his boys.
